## NEW PACKING KITS FOR JOYCE/DAYTON LIFTS

SVI has expanded the selection of lift Packing Kits for Joyce/Dayton Lifts, adding the new U-cup style used by the company.

This new U-cup style is a one piece, single lip seal design that installs quickly. The seals are pre-energized with ribs to help prevent low pressure leaking and field proven.

Each "Direct Fit" BRAND Packing Kit comes complete with the seal and wiper. Lift repair professionals have increased options with SVI products.

**SVI is the Answer!**

# SVI - Lift Packing Kits

**QUALITY - Much More Than Meets the Eye!**

---

## Material

1. **Only the finest materials are used in order to provide you with the highest level of quality assurance.**
2. **Rubber Molded items are manufactured using a Carboxylated Nitrile compound rather than the normal run of the mill Nitriles used by others. This compound provides for greater abrasion resistance, most important in the lift environment.**
3. **ONLY 100% Virgin Materials are used - NO REGRINDS, NO FILLERS as found with lower quality producers.**

## The Molds

1. **Scheduled Mold Inspections are conducted routinely to assure proper alignment and product continuity.**
2. **As molds approach the end of their cycle life, they are replaced in order to produce product while maintaining the fit and finish expected.**

## Inspections

1. **Each seal is hand trimmed and inspected at four stages of production. (At prep for proper weight, after being demolded for non-fills and voids, during the trimming process and again in the QC Department.)**
2. **Inspection is done to a 4.0 AQL level using mil standard 105E, which is RMA (Rubber Mfg. Assoc.) Standard for Rubber Molded Goods.**
3. **At the time just prior to final kit assembly each component is once again 100% inspected.**

**LIFT PACKING KITS are SERIOUS BUSINESS at SVI**
