

## "Full Feel" nitrile gloves

Protect your hands from grease, oil and harsh solvents. Nitrile "Full Feel" is the revolutionary glove that gives you the feel for what you are doing. Nitrile gloves are a better material and do not tear as easily as latex.

Many lift repair pros are wearing nitrile gloves to keep hands clean during service and installation jobs.

SVI now stocks these 4 mil gloves in convenient 100 pack dispenser boxes. They are so inexpensive it's hard to justify not protecting your hands. Add a couple of boxes to your next order. Choose from five sizes, X-small through X-large.

## You kneed these!

Let's face it, your knees aren't getting any younger. Protect your patella bone from the day to day rigor of lift service. You deserve the best. For knee protection you now have three choices in protection good, better and finest.

**Good knee protection** is very inexpensive and designed for only occasional use, once or twice a week for a few minutes. These are a flat foam style with a plastic cap. Do not order these if you end up working on your knees more than once or twice a week. For inexpensive knee protection order **SE-1050**

**Better knee protection**, it's worth it. Patella Bead personal kneepads with protective cap are the first to use hundreds of tiny, waterproof polyethylene foam beads to fully support your knee. Multiple bead chambers are precisely filled in such a way as to disperse pressure away from your kneecap. Each bead is free to move up, down and sideways to create a comfortable kneepad you can wear all day. For better knee protection and to start working in comfort order **SE-1051**

**Finest knee protection**, it's worth every penny. Lift technician, carpenter, electrician, the complaint is the same. At the end of the day, their knees are so sore they can hardly walk.

The fact is, today's popular knee pads can make sore knees even sorier. That's because they concentrate all of your body's weight on the patella, a bone that's just 2 inches around and less than 1-1/4 inches thick.

Patella T, the first orthopedically-approved kneepads, protect the anterior knees from the prolonged pressures of kneeling. To order knee pads made for professionals ask for **SE-1052**, it's worth every penny for the protection.

## Tired of Sore Knees ?

Check out Patella T's unique features

- Distributes pressure away from your patella.
- Neoprene base provides needed support and warmth to delicate knee joints.
- Integrated strapping system stops pads from constantly slipping down the leg.
- Fluid flow packs continuously conforms to cushion your knee.
- Patented T-Wedge cap helps disburse patellar pressure to the upper shin area.
- Built to last. Delivers maximum comfort with a tough Cordura nylon outer layer and a wicking, inner layer.

## Fore and aft oil control valves - a build it better solution.

**From the demise of a foundry, a greatly improved product rises from the ashes.**

SVI now produces oil control valves using aircraft grade aluminum that has been hard coat anodized, after machining, to a 58 to 62 Rockwell. This process makes the valve even tougher in the field, providing extreme wear and corrosion resistance.

Made to the same profile as the old cast iron version, these valves are a *Direct Fit™* for your field replacement needs. Whether you are working on a *Power Post*, *Rotary* or *Weaver* these valves will do the job. Interchangeability across the board - **SVI is your answer!**

## Add it to your arsenal... Model SE-1100 Tool Station

Ideal for use where tire service or general automotive service is performed. Mount the tool station to the floor and bring in air service so mechanics can keep popular tools right by their side.

There are special notches machined in the top plate for hanging tools and two convenient trays for small tools and nuts and bolts. Each side has a hanger for an air impact wrench. Call us for more details.

**The Power Station™** is a popular product addition thanks to the marketing efforts of SVI distributors.

To enhance sales some distributors are now purchasing power stations and including them with new lifts. What better lift sales tool is there? Why not supply your customers with a product that will make their jobs easier and more efficient? Help your customers increase shop productivity today.

## Magnetic tool retriever.

Easily retrieve tools that get dropped down a pit. Ideal to keep on your service truck. Also a great item to supply your customers that work anywhere a pit exists. Why lose it when you can retrieve it?

The retriever is a full 6 feet in length and can pick up 8 lbs. with its powerful magnet. Order **SE-1015** and begin stocking your tool box with dropped and lost treasures today.

**when it's in the pit**

## Rugged Wipes

Clean your hands without water. Quickly remove oil, grease and grime with these great one step multi-purpose pre-moistened wipes. These wipes are not like the wimpy moist towelettes you get after eating ribs.

**Order SE-1010**

# SVI Power Post Lifting Systems

- 22 real in-ground models
- Capacity ranges 11,000 to 72,000
- Sold to distributors only
- Many options

No lift is safer, more reliable or economical to operate than a *Power Post* in-ground lift. Proven for years. In fact, many *Power Post* style lifts installed well over 50 years ago are still in service and operating as reliably as the day they were installed. Why? There are few moving parts on a *Power Post* lift, the design is simple and above all, safe.

## Where is it? *It's on the arm!*

Magnetic holder for lift arms holds tools, nuts and bolts for easy access. Each holder is produced using two powerful magnets encased in a stainless steel housing. Available in different lengths to fit different size arms you will encounter.

**New Products:** All of us at SVI are working very hard to broaden our product line to provide you with more products to make your job easier. Add to your arsenal. Give us suggestions for products you would like to see us carry.

One distributor asked us to explore a line of shop service equipment. We are taking your advice. Another distributor has asked us to explore replacement parts for brake lathes, good idea. Or, how about a line of tools used in lift installation, like hammer drills?

Your input is very important to us. We want to be known as the company that reacts to your suggestions, not the one that sweeps them under the carpet.

For true distributor support - **SVI is your answer.**

Contact your favorite SVI representative for all the *Power Post* details.

## SVI Shop Equipment

Watch for the selection to grow.

**SE-1201-04**  
**4 Ton FloorJack**

Large saddle.  
Long chassis.  
Stable design.  
Foot pedal operation provides quick, no load lifts to load point.

Foot pedal operation provides quick, no load lifts to load point.

**SE-1201-04**  
**22 Ton Air Actuated Hydraulic Axle Jack**

Saddle adapter with extension screw.

Long chassis.  
Compact, low profile design for maximum access.  
Handle actuated release valve provides precise control of lowering speed.  
3 handle angles.

## DTO28 lifts saved!

**STOP** Rotary DTO28 equalizer box cave-ins from causing your customers problems.

**SVI's Drop-In Rack and Pinion Equalizer Upgrade Kit** is the solution DTO28 lift owners have been seeking.

This kit provides lift repair pros with a real service solution. Many DTO28 lifts have one problem in common, the equalizer box corrodes and begins caving-in. This condition causes the crossbeam portion of the existing equalizer mechanism to hang up and impair or completely stop the lifts function. While, there is nothing else wrong with the lift, lift owners in the past were faced with two costly options, replace the lift or excavate and install a new equalizer - **this is over!**

The SVI Rack and Pinion Upgrade Kit increases your service opportunities accounts by certain lift manufacturers. This means you can't even sell your customer a new lift. All you get is a nominal kick back of a few percent from the lift manufacturer for the sale and a few hundred bucks for the installation. Why sacrifice profit? Your customer would rather save their DTO keeping its versatility and avoiding the expense of a new lift.

Save your customer money and increase your profits. When a new lift is sold you don't get a full profit service job, like replacing a seal and gland until the warranty is up. Why limit your opportunities?

Installation is simple. The job is profitable. For all the specific details contact your favorite SVI representative.
