

Stronger, Faster, Neater and Removeable. . .

The TITEN HD® heavy duty screw anchor is all that and more.

There are so many benefits to the Titen HD that it is difficult to cover all points in one Twin Post feature.

Lift installers will find the Titen HD to be the anchor solution of choice in many cases. The Titen HD is a patented high strength anchor for concrete. The self-undercutting, non-expansion characteristics make it ideal for lift installations, even at smaller minimum edge distances. The proprietary cutting teeth enable the Titen HD to be installed in one eighth of the time required than when using wedge style anchors. In other words, drill your hole, blow it out and screw the anchor in with an air impact. Yes, unlike standard wedge anchors, you can safely use an air impact when installing Titen HD's.

Caution: you should NEVER use an air impact to install a standard wedge anchor.

Never have another ugly anchor installation like this again.

The Titen HD was properly installed in seconds.

The Titen HD looks neater and is not a trip hazard.

The serrated teeth facilitate cutting and maximum strength.

The Titen HD is easily removed at a later date for lift relocation.

The Titen HD can be installed closer to edges and cracks.

The Titen HD Screw Anchor develops more ultimate strength than conventional wedge anchors. SVI recommends that installers carry the 3/4" x 5" or 3/4" x 4" for lift installations. All other sizes from 3/8" to 3/4" are also available.

Update for the S V I Line of Automotive Service Equipment Repair Parts - March 2006

Newsletter by SVI and Spare Part Productions

A KILLER IN THE TUB

When was the last time you checked down inside a cassette lift containment tub? If you have not checked on one lately, be very careful and remain calm the next time you do. Watch out, there is a killer lurking down there and the killer's name is WATER.

Each time a cassette lift is operated, fresh, moist air is drawn down into the containment tub. Once inside, the coolness of the surroundings causes moisture to drop out of the air and begin accumulating. This moisture or better known as water, "the lift killer" starts its almost termite like assault on the steel and aluminum components of the lift. The

items subject to attack "by the killer" include the welds, the load bearing steel structure, the equalization beam, safety lock components and every nut and bolt.

The air cylinder pictured to the left is just one such component that was attacked by the killer and removed from a cassette lift. The air cylinder functions as part of the safety lock mechanism. Could other components be corroding away? Take a look for yourself. Out of sight, out of mind corrosion may be going on right below a shop technician's feet, while 4,000 lbs. of a four door sedan are above his head.

We know water in the lift is not a good thing. Now with SVI's patent pending "Aqua-Out" automatic water removal system there is something you can do to end water accumulation inside the tub. "Aqua-Out" installs in just less than two hours and

removes up to 2 gallons of water each time the lift is lowered. The "Aqua-Out" kit comes complete with a moisture filter/regulator, pump, tubing and an in-line filter that are all specially designed for the rigors of service this application requires.

The picture above to the left shows a corroding lift without an "Aqua-Out". The picture above and to the right illustrates how easily the "Aqua-Out" system fits in a cassette style lift. It is strongly believed that installation of the "Aqua-Out" system is crucial and should be done sooner rather than later. Later is too late! This low cost solution to automatic water removal is worth every penny because it will protect the investment in the lift and everyone's peace of mind.

Get the water out now!

If you know anyone that owns a shop equipped with cassette style lifts like the one pictured to the right, get an appointment with them. Open the center cover and show them what is going on deep inside the tub.

SVI Supports Distributors

Custom Saddle for RV manufacturer

This saddle was designed by SVI engineers to meet the needs of an RV manufacturer whose chassis had changed. It fits on a model AC-1010 lift that was produced by Western Hoist. This saddle and adapter package provides extended reach capability and quick position pad style adapters.

SVI enjoys meeting the custom needs encountered by SVI distributors. The next time you are asked for some help with a challenging new need, we hope you contact us with your customer's requirements.

SVI has the capacity to supply even the FOREIGN parts.

BH-7512-70

The BH-7512-70 is the start-up capacitor that fits the Italian made 1Ø Global Hydraulic power units found on newer Rotary lifts. This is a very popular item for us and we are carefully adjusting our inventory levels to match your immediate requirements.

If you service or install Rotary lifts, this would be a good item to keep at least one of on your truck. Doing so means you will be ready at a moments notice to get a customer back up and running quickly. SVI is your answer.

All names, numbers, symbols and descriptions are used for reference purposes only. It is not implied that any part listed is the product of these manufacturers; however, some parts may be the actual product of these manufacturers.

American Made Turnplates

stainless steel version

So many of the low cost turnplates on the market today are made on the other side of the Earth. We decided there was no reason why turnplates couldn't be made right here in the Country's Heartland and our welders and machinists couldn't have agreed more.

Specifications:
 Sold as a set of two turnplates
 Turnplate Diameter: 13-1/2"
 Base Size: 14" x 14-1/2"
 Capacity: 1-1/2 tons each
 Part numbers:
BA-1600-04 Painted
BA-1600-04SS Stainless

SVI is pleased to announce low cost US worker made front wheel alignment turnplate sets. These turnplates are quality constructed and easily serviceable. Take your pick. You can choose from either a painted black carbon steel version (not pictured) or a stainless steel version. The stainless steel version is ideal for colder climates, where salt is used on the roads. Each carries SVI's standard one year warranty and is guaranteed Made in the USA.

This space lift intentionally blank for inspection notes or lift inspection company's business sticker.

It is highly recommended that automotive lifts be insp a qualified lift service company every six months.

Custom Sticker Design Service

Routine lift inspections are becoming more and more popular. SVI was recently asked to make up an inspection sticker for a company to place on lifts after each inspection. If you would like to start using the same lift inspection sticker, order BH-7011-11. These durable vinyl inspection stickers are supplied in bundles of 50 stickers.

SVI is also pleased to announce our custom sticker design service. We will be more than happy to readily design and print specialized stickers tailored to your direct requirements. We can even add your business logo and contact information. In other words, custom stickers just for you. Contact us for details.

Replacement air motors for Coats and other tire changers.

BW-1225-72-1	Air Motor Repair Kit 4 Vane
BW-1211-90	Air Motor 4 vane reversible fits Coats 5050, 5060, 5070, and RC15 (181190)
BW-1211-90-1	Air Motor Repair Kit 4 Vane

Featured new product

Whatta Duckhead. . .

It's time for a stronger change

While the tires on your service trucks may not be ready for replacement, there are plenty of customers with tire changers that can use new higher strength nylon mount/demount heads.

SVI is pleased to announce the addition of repair and replacement parts for tire changers. Our first significant addition to this product line is the mount/demount head pictured to the right. This mount/demount head is offered at a significant savings while affording the user a higher strength, better performing product. The nylon material used in the production of SVI's product yields a tensile strength of about 31,000 psi. The standard PA6 nylon used by others only yields a tensile strength of 12,000 psi. SVI is able to deliver this higher performance mount/demount head due to a special investment in highly advanced tooling.

This popular mount/demount head fits Coats RC5, 10, 15, 20, early 5060 and many newer models, Hofmann, Sice, Ammco 740, all Corghi, All Tool, Giuliano, and Mondolfo Ferro just to name a few.

Try a few today. Contact SVI sales for your special introductory price on these super duckhead mount/demount heads.

SVI stocks or carries so many lift repair parts it is hard for even us to keep up. What this means is simply that if you need a part, chances are we will have it ready to ship right away. The hydraulic valve pictured above is another fine example. This valve is used on certain Rotary lift models.

SVI's P/N is BH-9769-16 and the OE ref. number is FA3156. The next time you need this part call us, you will be very happy with the price and availability.

Forward March

SVI remains 100% dedicated to supplying lift industry distributors with all types of lift repair parts and new solutions. This means our selection of available parts will continue to grow.

We are in the process of having production partners ramp up to meet the growing demand for American Made repair parts for American Made Forward lifts. There are many Forward lifts in the field today that need the type of nonstop parts availability that only SVI can provide.

From arm restraints to replacement cylinders and everything in between for Forward lifts, SVI can be relied upon as your trusted source. We will start work soon on a new and comprehensive SVI "Lift Repair Catalog" featuring a full selection of all the repair parts for Forward lifts.

SVI will also continue its focus on making lift repair parts available for all the various import lifts from countries such as China and Korea. If you need anything for an import lift, let us know. Our engineers, fabricators and machinists are ready to domesticate the parts and produce them right here in the United States. **SVI is your answer!**

SVI Power Post Lifting Systems

Low cost, last a lifetime lifting solutions. This product has proven itself time and time again for well over 50 years. It is extremely safe and reliable. It is Easy to install, maintain and service. And, with today's casing coatings and Aquamaine® hydraulic oil from CITGO Petroleum environmental concerns are a thing of the past.

Specify only proven products the next time you need a heavy-duty lift. New style lifts on the market do not have any track record and are loaded with all kinds of cost moving parts and electronics. Lifts are the one product that should remain simple for reliable and safe operation.

Low pressure lifts provide full displacement protection. This means a 7-1/2", 10-5/8" or 12-5/8" cylinder rod is fully supporting the load versus lifts made by others today where only a small 2" or 2-1/2" cylinder is actually supporting the bus or truck. For controlled descent and optimum safety some things just should not change. Put simplicity and safety back into the shop.

Specify Power Post Lifting Systems! Everyone will rest better at night including the taxpayers and the those who actually work under the lift.

Have you received your copy yet?

A complete booklet covering the best heavy-duty in-ground lifts available was mailed to all SVI distributors this past January.

Power Post lifts are low cost, last a lifetime lifting solutions. This product has proven itself time and again over the last 50 plus years. Power Post lifts are extremely safe and reliable. Why? Because, Power Post style lifts have few moving parts and the design is robust, simple and above all sound.

Everyday both lift users and distributors are making the conscientious decision to purchase and specify only proven product with a real track record. Power Post lifts are the one product on the market that still uniquely fit this need. The next time you need to quote a heavy-duty lift call SVI first.

Power Post lifts are Made in the USA and feature nonstop parts

model 2P-202
wheel or axle engaging rear

availability, proven engineering, low cost of operation, ease of maintenance and a truly robust design. There are over 22 heavy-duty models to choose from and plunger sizes range from 7-1/2" on up to 12-5/8". These are real deal lifts that provide full displacement protection, which means the whole plunger is supporting the load and not just some little cylinder hidden inside. For controlled operation and optimum safety, some things just should not change. Put simplicity and safety back into the shop.

Custom lift configurations are also available. If your customer has special needs, SVI will gladly help solve the specific requirements. From straight trucks to school buses and public transit buses to the biggest salt trucks, SVI is your answer.

Re-continued. . .

Lift owner/operator safety is always a key concern. Whether a lift is brand new, 10 years, or 40 years old, SVI believes in the continual availability of all the parts even those important to the lift's safe operation. Recently, the low oil lock on the right was discontinued by the original manufacturer.

SVI has once again stepped in to make this very important lift safety product available again, forever. Today, there remain literally 1,000's and 1,000's of FP46A single post lifts still in service. These lifts were once produced by the Rotary lift company. If you need to replace the low oil control on any Rotary semi-hydraulic single post lift, SVI is your answer.

Without this device a low oil situation can cause potential dangerous rapid or erratic lift motion. The low oil control is very important because it prevents operation of the lift if the oil volume is below the proper safe operating level.

Under a load air will compress, compress, compress until wham, it suddenly overcomes the load and expands very fast creating a catapult like effect on the load, the vehicle on the lift. SVI and its engineers remain committed to working on ways to keep the auto lift industry continually supplied with safety related products.
