#5 Slitter Lowerator

Quickly solving the needs of industry is one MLM specialty that does not go unnoticed.

The cylinder pictured was specified, designed and built in less than a weeks time. A major graphics company was going on a routine one-week maintenance shut down when they realized the #5 slitter lowerator cylinder needed to be replaced. They had not anticipated this and needed a quick solution now. The graphics company contacted their local distributor for help. MLM was then called to duty and this cylinder arrived during the middle of the one-week shutdown. It was installed without a hitch and production was able to come right back on-line just as scheduled.

This 48" stroke, 10-5/8" diameter cylinder has an extended rod with a 3/4" through hole that is used to hold a special platform in place.

For industrial applications, put the MLM crew to work for you.

Awesome Oven Extension

When a job reaches new dimensions and requires a solution, MLM can help. This is exactly what just happened when the Armoloy Corporation needed to increase the size of one of their ovens used in their exclusive process to accommodate some larger product.

MLM Lifts & Mfg. quickly designed and built this removable oven extension to accommodate their needs. The double wall oven extension is well insulated and stays cooler to the touch than the original oven, proving its efficient design. When the Armoloy plant needs special solutions, they always turn to MLM.

MLM stands ready to help you with your fabrication requirements whether it is a one off need or small-to-medium size repeat jobs. Competitive pricing and quality workmanship make MLM a good choice to add to your arsenal of suppliers.

To learn more about the Armoloy Corporation's proprietary process of applying thin, dense, chromium coatings with high hardness characteristics, visit their website: www.armoloy.com

Just an Air Powered Rolling Jack or More?

This air powered rolling jack is manufactured by MLM and distributed by SVI International, Inc. to companies that sell and install automotive service equipment. It is MLM's opinion that this piece of equipment could be design modified and incorporated into specialized material handling applications in manufacturing plants and automated distribution facilities.

The unit operates quickly with compressed air and has a lifting force capacity of 6,000 lbs. making it ideal for heavier load applications. The base structure could be changed to mount as required and could be either moveable or fixed. The top structure could be reconfigured to cradle whatever type of product shape it may need to accommodate or position. The possibilities are broad and if you can envision any kind of custom application, please contact us to discuss the possibilities.

MLM is an openly responsive company to the opportunities distributors encounter.

MLM equals American Ingenuity and strongly supports distributors.
