

Air Motor Rebuild Kits

for Graco Lubrication and Spray Equipment

Providing product solutions, whether it be directly to OEMs or service professionals, the SVI companies have always succeeded to balance true precision with exceptional value. This type of combination requires an astute attention to detail and engineering expertise difficult to surpass. Understanding application demands and proper material specifications means SVI products remain the top quality choice for industry professionals.

The SVI selection of high end quality repair products suited for use on Graco lubrication and spray equipment is standard operating procedure. Each component is carefully specified to ensure proper tolerance and material requirements are met to afford the highest quality and performance levels expected. Each component is not only equal to anything else available they more often surpass components used by others.

The POPPETS used in these repair kits are one of the key ingredients in proper function and use span longevity of the air motor. To make sure the final material analysis was 100% exceptional, SVI engineers worked closely with chemists. This was done to determine without doubt that a company widely known for its pharmaceuticals but also one who specializes in high tech polymer materials could supply an unsurpassed poppet compound. Ultimately, this led to the selection of Bayer MaterialSciences as the chosen specified compound supplier of SVI's poppets for use in these kits.

Bayer MaterialSciences excels in applications such as lightweight automotive construction materials, sustainable building materials for the construction industry and high tech materials for the electro and electronics Industries. Ultimately the combined team effort of SVI engineers and specialty compound chemists led SVI to the crucial specification of a confidential Bayer MaterialScience compound. This serves to further demonstrate SVI's commitment to true precision and exceptional value.

SVI Direct Fit™ brand repair products and kits—It's not just simple conformance, it's exceptional performance that counts!
